Summary

Senior Analytics Engineer | Microsoft Fabric • Power BI • Medallion

Founding data hire and sole engineer on a 4-source Medallion architecture in Microsoft Fabric. Unified millions of timecard, shift, and invoice records across 4+ years of operational history into a Kimball star schema and a governed Power BI semantic model with Row-Level Security; defended 99.5%+ reconciliation against legacy production before cutover. Lead a 3-person BI team — review analyst work, maintain PR and reconciliation gates, and own Fabric dev/prod release standards.

Technologies

Data Platforms: Microsoft Fabric (Lakehouse, Warehouse, Data Pipelines, Dataflow Gen2, Notebooks, Direct Lake, OneLake shortcuts)

Data Engineering: Medallion Architecture (Bronze/Silver/Gold), Delta Lake, Delta MERGE (CDC, soft-delete, schema evolution), PySpark, Spark SQL, Python, SQL, T-SQL stored procedures

Analytics & Modeling: Power BI Semantic Models, Tabular Editor, DAX (Calculation Groups, time intelligence), Kimball Star Schema, conformed dimensions, Row-Level Security (RLS)

Ingestion & Integration: REST API (paginated, overlap-window incremental, retry/backoff), custom-report APIs, SFTP CSV, live-shortcut sync

DevOps & Governance: Azure DevOps, Git PR workflows, Fabric-Git integration, CI/CD pipelines, bisectable commits, reconciliation engineering

AI Dev Tools: Claude Code, GitHub Copilot, Cursor

Experience

Analytics Engineer (BI Analyst of record), Sunburst Workforce Advisors – Columbia, MD (Remote) May 2024 – present

- **Founding Data Hire & Team Lead:** Joined as the company's first data hire — built the initial Power BI environment from scratch (dataflows, semantic models, report suite), then drove the re-platform onto Medallion when dataflow proliferation hit scale limits. Now lead a 3-person BI team and own engineering standards: Azure DevOps Git integration, PR review gates, CI/CD pipelines promoting Fabric workspaces dev → prod, and the team's first analytics engineering runbooks.
- **Medallion Architecture & Platform Build:** Designed and built the Medallion architecture on Microsoft Fabric as sole engineer — Bronze/Silver/Gold flow integrating 4 VMS systems (REST APIs, SFTP batch files, live-shortcut sync) into a Kimball star schema with five fact tables and conformed dimensions, covering millions of timecard, shift, and invoice records across 4+ years of operational history.
- **CDC-Style Multi-Source Integration:** Designed Delta MERGE patterns tailored to each source's constraints: 3-day overlap-window incremental pulls for the primary REST API, soft-delete audit tracking for a vendor API that silently removes records on hard-delete, and SFTP ingestion with file-date tiebreaker parsing for a daily-CSV source with no incremental markers.
- **Reconciliation Engineering:** Built a per-source, per-grain reconciliation framework comparing gold facts against legacy production on keys and invoice totals; achieved 99.5%+ match across 9,941 orders, 4 VMS sources, and 4 years of operational history before authorizing cutover. Documented residual variance by exception category (vendor refresh cadence, API-vs-batch CSV drift) — no logic gaps.
- **Reporting Platform & Governance:** Consolidated 30+ disparate Power BI reports onto one governed semantic model with Row-Level Security — single source of truth for ops and finance. Eliminated cross-report data drift and replaced the 4-hour Friday manual data assembly process that fed the parent company's weekly financial reporting.

Business Intelligence & Systems Analyst, Makkah Learning Center – Maryland Apr 2018 – May 2024

- **Power BI Development:** Designed and deployed the organization's first Power BI reporting suite, automating KPI tracking and reducing weekly reporting cycles by 50%.
- **SQL Data Pipelines:** Built automated data extraction queries using SQL to replace manual reporting processes; performed exploratory data analysis to identify hidden donor engagement patterns.
- **Strategic Growth:** Conducted donor segmentation analysis on historical engagement data; informed targeted outreach that correlated with a 200% lift in subscription conversions over the subsequent campaign cycle.

Owner / Operator, Corner Cafe – Maryland

Sept 2019 – May 2021

- Owned full P&L for a brick-and-mortar food service business as sole operator. Built Excel-based financial models for inventory forecasting and budget planning, applied analytics to POS transaction data and Google/Facebook Ads attribution to optimize spend, and ran all hiring, vendor, and operations decisions — grew profitability 30% in six months and customer acquisition 22%.

Projects

Imanic — Gamified Edtech Platform

Feb 2025 – present

- Architected and shipped a gamified edtech SaaS for homeschool families — courses, daily AI-generated quizzes, XP/badge economy, parent-child account model with privileged oversight, and Stripe subscriptions. Stack: NestJS 11, Next.js 15, PostgreSQL via Directus, deployed on Render. Built solo in 11 months with Claude Code as a code-generation accelerator under PR-gated review; architecture, data-model, and trade-off decisions retained as my responsibility.

Education

The Open University, BS in Economics

Sept 2014 – May 2018
